

Project title : CARBONEX - Consulting services to support targeted analysis on NDC implementation - Forest/cocoa and national climate infrastructure

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire	117 000 €	Cocoa and forest expertise	TEREA, The World Bank	September 2023 - January 2024

Project's goals and results

Main goals

Côte d'Ivoire is particularly active in the field of climate change mitigation and the fight against deforestation, which is one of the most pressing issues in the country (deforestation rate mainly due to cocoa production). This is illustrated by the several policies and instruments that were developed (REDD+, the National Forest Monitoring System, the Integrated Safeguards information system (SIS), the National MRV system, the Emission Reductions Programme (ER-Program), etc.) and which can help the country in the operationalization of **Paris Agreement** article 6.

Côte d'Ivoire has made some engagements as part of its second Nationally Determined Contributions (NDC) issued in 2022, tailored to be aligned with the Paris Agreement, which sets out in its Article 6 the instruments for a country to benefit from **carbon revenues**.

The purpose of this study is to **review and assess the relevance of these instruments and to provide recommendations on how to mobilise them to benefit from Article 6 modalities**.

Specific objectives

SO1. Assessment of existing initiatives, policies and strategies which will give an exhaustive list and description of the instruments that can have an impact on Côte d'Ivoire climate change strategy, NDC and Article 6

SO2. Assessment of the economic impact of the forestry and agriculture activities foreseen in the NDC, with a focus on cocoa

SO3. Assessment of the readiness of the instruments to facilitate the operationalization of Article 6

SO4. Development of an Article 6 strategy and action plan based on Côte d'Ivoire's climate instruments assessed in the previous activities
