

Project title : SAFLIN - Feasibility study for the design of an agroforestry and carbon pilot project of the Lindt agricultural program in Ghana and Côte d'Ivoire

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire, Ghana	94 000 €	Agroforestry and carbon expertise	Lindt & Sprüngli	December 2023 - August 2024

Project's goals and results

Main goals

As part of the Lindt Climate Commitment, the company has assessed its carbon footprint and wants to commit to reducing it; and agroforestry has been identified as a major lever of this strategy. It is therefore a question of designing an agroforestry pilot project which will be evaluated according to the Golden Standard Scope 3, by studying (i) the efforts already undertaken to promote the agroforestry transition of suppliers, (ii) the carbon sequestration of plots of cocoa agroforestry practices and (iii) recommendations for a program establishing favorable conditions for farmers to adopt agroforestry practices

Specific objectives

- SO1.** Get an overview of the project structure, stakeholders, their roles and responsibilities
- SO2.** Develop a system to encourage farmers to agroforestry including the implementation of Payments for Ecosystem Services (PES)
- SO3.** Propose a monitoring and reporting plan
- SO4.** Identify an agroforestry exploitation model
- SO5.** Establish a carbon monitoring model and analyze it
- SO6.** Define a project schedule and budget
