

Project title : AUDIMAÏS - Structuring a company's maize supply chain in Burkina-Faso

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Burkina Faso	18 000 €	Value chain and business plan expert	Association of European Development Finance Institutions - EDFI, Agroserv Industry	July 2021 - August 2021

Project's goals and results

Main goals

Technical audit for the structuring of a company's maize supply chain in Burkina Faso

Specific objectives

SO1. Diagnosis of the current supply situation of the maize mill, taking into account the potential and risks related to supply through existing channels

SO2. propose a SMART action plan to help the maize mill to increase its supply in compliance with its specifications (required quality) and the contracts in place (specified prices and deadlines)

SO3. Draft a support plan for the implementation of the action plan taking into account the opportunities for financing the activities through the planned subsidies

Beneficiaries

Results

R1. A diagnostic report on the current supply situation including an analysis at company level and at the level of its current suppliers. This report will focus on the opportunities and risks existing on both sides of the supply chain

R2. A Specific, Measurable, Attainable, Reachable and Time-bound action plan including the activities, timing and cost to be implemented for the company and each supply channel

R3. A plan to support the implementation of the action plan including an analysis of the financial means available and planned

Activities

A1. Consultation of available documentation

A2. Design of survey grids

A3. Analysis of the organisation of raw material supply by the maize mill

A4. Analysis of suppliers' capacities

A5. Field surveys

A6. Collection of additional data

A7. Analysis of data and drafting of the diagnosis and action and support plans

A8. Reporting of deliverables
