

Project title : BCVANILLA - Carbon footprint Scope 3 of the Norohy company supplying vanilla from Madagascar

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Madagascar		Carbon footprint expertise	Norohy, VALRHONA	October 2021 - December 2021

Project's goals and results

Main goals

Norohy's ultimate goal is **full scope carbon neutrality by 2025**. In order to achieve this goal, it is important to identify the **emission factors** associated with the company's activities. This is the first step in helping to build a **emissions offsetting** strategy. Norohy controls its supply chains through long-term partnerships for vanilla, the main product, and also organic sugar. The mission will therefore have to establish the carbon footprint of the company's full scope activity using recognized methodologies.

Specific objectives

SO1. Carry out a full scope carbon assessment of the Norohy activity

SO2. Prepare a carbon offset strategy, ideally as an insetting program. Other options could be explored, such as buying back carbon credits from projects in Madagascar, for example.
