

Project title : CALLIVOIRE - Monitoring the yields of Banzai™ demonstration plots on cocoa				
Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire	11 000 €	Expertise cocoa sector	Callivoire	June 2016 - June 2017
Project's goals and results				
<b>Main goals</b> Monitor in real conditions the effectiveness of the biostimulant BANZAI™ on the production of beans (35 parcels distributed throughout the cocoa zone, in 2016).				
<b>Specific objectives</b> <ul style="list-style-type: none"> <li>• Encrypt the effect of BANZAI™ on the production of cocoa pods and beans</li> <li>• Show customers the effects of BANZAI (increase of pod production, increase of yield).</li> <li>• Collect data (performance variables) to help refine communication with clients.</li> </ul>				
<b>Beneficiaries</b> CALLIVOIRE				
<b>Results</b> <b>R1.</b> Study report containing an operating account by technical modality, details of farmers' practices, raw data collected <b>R2.:</b> Summary report after each field mission				
<b>Activities</b> <b>A1.</b> Follow-up of 6 parcels to attest to the results obtained when using Banzai™ <b>A2.</b> Follow-up of the harvest of plots in November and January to obtain the final yield of the 6 parcels <b>A3.</b> Counting of flowers / cherries / pods of 6 parcels in June and September
