

Project title : CALLIVOIRE - Monitoring the yields of Banzai™ demonstration plots on cocoa

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire	11 000 €	Expertise cocoa sector	Callivoire	June 2016 - June 2017

Project's goals and results

Main goals

Monitor in real conditions the effectiveness of the biostimulant BANZAI™ on the production of beans (35 parcels distributed throughout the cocoa zone, in 2016).

Specific objectives

- Encrypt the effect of BANZAI™ on the production of cocoa pods and beans
- Show customers the effects of BANZAI (increase of pod production, increase of yield).
- Collect data (performance variables) to help refine communication with clients.

Beneficiaries

CALLIVOIRE

Results

R1. Study report containing an operating account by technical modality, details of farmers' practices, raw data collected

R2.: Summary report after each field mission

Activities

A1. Follow-up of 6 parcels to attest to the results obtained when using Banzai™

A2. Follow-up of the harvest of plots in November and January to obtain the final yield of the 6 parcels

A3. Counting of flowers / cherries / pods of 6 parcels in June and September
