

Project title : COCOAJU - Feasibility study of the valorization of cocoa fermentation juices in a plantation - Madagascar

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Madagascar	8 300 €	Bio-energy expertise	VALRHONA	September 2018 - December 2018

Project's goals and results

Main goals

Study ways of recycling waste in cocoa plantations

Specific objectives

- Describe the issue of management of fermentation juice (quantity, degradation of equipment, environmental impacts ...)
- Identify treatment and / or recycling possibilities. The possibility of energy recycling will be explored in particular, as well as opportunities for links with other activities in the region (livestock, recycling of biomass ...)
- Propose a plan for the establishment of a pilot plant for treatment and / or recovery in the plantation
- Perspectives for all of the sponsor's supply
