

Project title : FOGANDA - Mid-term evaluation of the project "FoFauPopU - For a new forest-fauna-population balance in Uganda"

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Uganda	24 000 €	Forest and market	Project for the Conservation of Great Apes, Museum National d'Histoire Naturelle, FFEM - French Global Environment Fund, AFD - French Development Agency, Metajua	September 2022 - November 2022

Project's goals and results

Main goals

The FoFauPopU project was set up in 2019 to improve the conditions for the preservation of natural resources north of **Kibale National Park**, in particular by resolving issues of local economic development, food security, agricultural practices and human-wildlife conflict management. This project is implemented by the NGO [Projet pour la Conservation des Grands Singes](#) (PCGS) and the [Muséum National d'Histoire Naturelle](#) (MNHN), as well as Kinomé at the start of the project. The project is now halfway through and has already gone through various difficulties which have led in particular to a reorganization of tasks. The FFEM therefore requests a mid-term evaluation of the project in order to establish an overall assessment of the **activities** and their **impacts**, as well as the effectiveness of the **partners** for the implementation actions

Specific objectives

SO1. Nitidæ will mobilize classic evaluation tools, namely an objective and independent analysis of the **six DAC/OECD criteria** for the evaluation of development aid (relevance, coherence, effectiveness, efficiency, impact and viability/sustainability)

SO2. The evaluation will benefit from the operational expertise of Nitidæ linked to the implementation of projects in similar contexts (development of value chain in **Protected Areas**, community development in contexts of human-fauna conflict...) and with an "economic" approach by mobilizing its tools for analyzing market dynamics, analyzing and development of **value-chains**, but also analyzing **landscape dynamics** or support for agro-ecological transitions

SO3. Propose ways to improve the approach to support agricultural production that generates income and protects forests. This evaluation, more than a mechanical review of the criteria, should help the stakeholders in the reorganization of the project. It must therefore be operational, realistic and precise in its recommendations
