

**Project title : FONE - Technical Assistance to institutions in charge of REDD+ process**

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Madagascar			ONE - National Office of the Environment (Madagascar), DGF - The Directorate General of Forests (Madagascar)	September 2012 - November 2012

**Project's goals and results****Main goals**

Management training to the National Office of the Environment and the General Directorate for Forestry of Madagascar

**Specific objectives**

- Measurement of carbon stocks of aerial biomass and soil via dendrometric inventories (measuring diameter and height of trees in the Vertex, entered with the OpenDataToolkit application), and pedological inventories (description and measurement of soil density, soil sampling)
- Historical analysis of deforestation by remote sensing via a theory session (remote sensing methods and REDD + requirements) and a practical session (implementation of the methodology developed under the PHCF)

**Beneficiaries****Results****Activities**
