

Project title : GEO4AGRI - Participation in the feasibility study of the GeoForAgri project

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire	6 500 €	Expertise télédétection	CIRAD - Agricultural Research for Development, IRD, IGN FI, CNES	June 2018 - October 2018

Project's goals and results

Main goals

Based on the lessons learned from the OSFT, GEOFORAFRI and OSFACO projects, AFD, associated with the National Center for Space Studies (CNES), undertook to carry out, with the support of CIRAD, IGN FI and the IRD, a feasibility study for a project to strengthen the use of satellite imagery in support of agricultural and natural resource management policies in West Africa, with Senegal and Ivory Coast as prime target countries.

The objective of this service was to contribute to the realization and restitution of this feasibility study for Ivory Coast.

Specific objectives

O1. Conduct surveys of different institutions or actors in the field of agriculture and remote sensing

O2. Co-organize a national workshop to report the results of the feasibility study

Beneficiaries

AFD, CIRAD, IRD, CNES, IGN FI

Results

R1. Survey results

R2. Organization of the workshop

Activities

A1. Conduct surveys of different institutions or actors in the field of agriculture and remote sensing

A2. Co-organize a national workshop to report the results of the feasibility study
