

Project title : GUIMILE - Support for certified organic sesame production development in Guinea

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Guinea	11 600 €	Agronomic and organic expertise	CONFIDENTIAL	July 2022 - September 2022

Project's goals and results

Main goals

Recommendations on the technical itinerary to be implemented, the analysis of the constraints and the recommendations for the technical support of 1000 producers in the Kindia region for a target of 800 tons of organic sesame
Sékourou area south of Kindia

Specific objectives

SO1. Analysis of the constraints on cultivation practices, including understanding of the advantages and constraints of sesame cultivation at the level of local production systems to take into account local peasant strategies in the biological strategy (crop calendar, seeds , animal traction, chemical inputs, competitiveness, competition with other crops, income, yields, labor, capital, etc.)
SO2. Propose cultivation techniques for sesame in organic farming (practices for maintaining soil fertility, management of weeds, management of pests and diseases, seeds and sowing period, etc.)
SO3. Guide the technical support of the company's team for certification
