

Project title : MANIOBE 2 - Support for the development of the cassava sector in the Bélier region

Project place	Project cost	Role in the project	Technical and financial sponsors	Dates
Côte d'Ivoire	65 000 €	Expertise	Auvergne-Rhône-Alpes Region (France), CLEXTRAL	November 2020 - November 2021

Project's goals and results

Main goals

Nitidæ and the company CLEXTRAL are working with the AURA Region to carry out a diagnostic and quality control tests in order to foster the sustainable industrialization of the attiéké sector in the Bélier region.

Specific objectives

To bring about the emergence of a sustainable, industrial model of attiéké production in the Bélier region, which could attract potential investors willing to establish themselves as long-term producers, with exports perspectives on regional and European final markets.

Beneficiaries

Actors of the attiéké sector in Côte d'Ivoire

Results

R1. Diagnostic of the attiéké sector

R2. Technical and feasibility study

R3. Industrial tests

Activities

A1. Diagnosis of the cassava and attiéké sector in the Bélier region and at national level (identification of supply sources, description of cassava production, identification of production weaknesses and potential...) this will be notably based on a market analysis

A2. Technical and feasibility study for the application of CLEXTRAL technologies (detailed description of the processing mechanism of attiéké, identification of key production parameters especially those applying to the first transformation of cassava dough), mapping of the actors producing the manufacturing machines for this process...

A3. Industrial tests to confirm the industrialisation feasibility and perspectives with CLEXTRAL equipment: Test 1: analysis of material reaction / Test 2: study on the feasibility of cassava "couscous" production
